

WORK EXPERIENCE

KayN AI

Software Engineer

Feb 2024 – Aug 2025

Seattle, Washington

- Implemented a new and more scalable graph-based approach to run web automations on healthcare portals. Portals were represented as JSON files, in which we could implement the concepts of nodes as individual web pages and edges as actions needed to navigate between pages. This significantly sped up the on-boarding of new clients and improved maintainability.
- Developed a graph-engine framework to execute workflows by translating graph edges into Playwright automation steps or different functions in content scripts, supporting both unobserved workflows that ran in EC2 instances, to observed workflows VIA our browser extension: KARMA.
- Contributed in developing and on boarding healthcare employees to a browser automation tool called KARMA, which automated everyday tasks such checking patient eligibility or the status of claims. This extension resulted in a 20% decrease in the time it took for users to complete their everyday tasks
- Implemented our microservices in a RESTful design pattern. These microservices handled various backend tasks for our customers such as credential management, updating statues of claims, or viewing details of scheduled patient events at a particular healthcare provider
- Deployed AWS-based unobserved automations, leveraging EC2, Lambda, and S3, and Docker to run patient eligibility checks and claim status updates at scale. This increased the efficiency of our clients' revenue cycle by 88%.

RSM US LLP

Associate Software Consultant

June 2022 – April 2023

Minneapolis, Minnesota

- Built and maintained client intranets on SharePoint, centralizing data and documents to increase productivity and Microsoft 365 integration.
- Demoed intranet solutions to potential clients, securing new projects and increasing team revenue.
- Wrote and deployed PowerShell scripts to automate SharePoint site creation, account management, and security administration. These scripts allowed us to complete our statements of work 35% faster.
- Managed team Azure DevOps repository, maintaining reusable PowerShell scripts across multiple client projects. The increased speed and efficiency of having cross-client scripts allowed us to shorten timelines for projects, as well as increase the number of projects the team could work on at once.
- Resolved SharePoint site functionality and end-user access issues, ensuring smooth client operations.

PERSONAL PROJECTS

Amazon Lowest Price RPA Bot

- Tools & technologies used: Nodejs, Typescript, Playwright Framework, MongoDB, Docker
- Developed a bot that scrapes Amazon.com for the 3 lowest prices of user-specified search terms.
- Parsed search results, sorted items by ascending price, and exported data to CSV files with product names and prices.

EDUCATION

College of Science and Engineering, University of Minnesota - Twin Cities

May 2022

Bachelor of Science - Computer Science

TECHNICAL SKILLS

Programming Languages/Frameworks: Typescript, JavaScript, React, SQL, PostgreSQL, Java, Python

Developer Tools: Git, Node.js, Azure DevOps, Playwright, Yarn, Docker, MongoDB

Cloud/Databases/Other Software: AWS/AWS SDK (EC2, Lambda, S3, RDS, DynamoDB), Microsoft Azure, SharePoint, Microsoft 365

Soft Skills: Limited working Mandarin, Good Communicator, Teamwork, Reliable, Quick Learner
