

WORK EXPERIENCE

KayN AI

Software Engineer

Feb 2024 – Aug 2025

Seattle, Washington

- Contributed to a novel and more scalable graph-based RPA framework to run web automations on healthcare portals. This significantly sped up the on-boarding of new clients and improved maintainability.
- Built dependency injection workflows to run the RPA framework in both a Node backend context, as well as in a chrome extension front-end context.
- Directly worked with healthcare employees to gather requirements and feedback for our chrome extension KARMA, which automated tasks such checking patient eligibility or the status of claims. This chrome extension resulted in a 20% decrease in the time it took for users to complete their everyday work.
- Designed and implemented RESTful microservices to automate EDI data ingestion for healthcare providers. Used AWS S3 integrations where providers could securely upload patient files, triggering backend workflows to process customer EDI data into our database, reducing time spent on tasks such as verifying patient insurance or checking statuses of prior authorizations by 75%.
- Created Grafana observability dashboards by connecting our backend databases to track usage statistics of our chrome extension and workflow efficiency. This gave us insight into potential improvements that we could make to our product.

RSM US LLP

Associate Software Consultant

June 2022 – April 2023

Minneapolis, Minnesota

- Built and maintained client intranets on SharePoint, centralizing data and documents to increase productivity and Microsoft 365 integration.
- Demoed intranet solutions to potential clients, securing new projects and increasing team revenue.
- Wrote and deployed PowerShell scripts to automate SharePoint site creation, account management, and security administration. These scripts allowed us to complete our statements of work 35% faster.
- Managed team Azure DevOps repository, maintaining reusable PowerShell scripts across multiple client projects. The increased speed and efficiency of having cross-client scripts allowed us to shorten timelines for projects, as well as increase the number of projects the team could work on at once.
- Resolved SharePoint site functionality and end-user access issues, ensuring smooth client operations.

PERSONAL PROJECTS

NBA & WNBA Top 5 MVP Candidate Tracker

- Tools & technologies used: Nodejs, Typescript, Playwright, MongoDB, Docker, Grafana
- Used playwright to scrape player data off of basketball-reference.com after every completed game
- Used a consistent statistical and data-driven approach to predict the most likely winners of the NBA and WNBA MVP
- Stores statistical data and the MVP rankings in MongoDB, tracking changes in rankings for players throughout the entire NBA and WNBA season
- Used Grafana as the visualization tool to create a dashboard with all relevant statistics. The dashboard would also update after every NBA game.

EDUCATION

College of Science and Engineering, University of Minnesota - Twin Cities

Bachelor of Science - Computer Science

May 2022

TECHNICAL SKILLS

Programming Languages/Frameworks: Typescript, JavaScript, React

Developer Tools: Git, Docker, MongoDB, Grafana, Azure DevOps

Cloud/Databases/Other Software: AWS SDK (EC2, Lambda, S3, RDS, DynamoDB), SQL, PostgreSQL, Microsoft Azure, SharePoint, Microsoft 365

Soft Skills: Limited working Mandarin, Good Communicator, Works Well In Teams, Reliable, Quick Learner
